POINT OF VIEW · STATE & LOCAL GOVERNMENT

NPS Survey CX OS

The service request isn't done until the resident says so.

Agencies measure how fast a request closes. Residents judge whether it was solved. Here is how to measure the second, at the moment it happens, without a new system.

For 311, CX, licensing and benefits leaders

Built for agencies on Salesforce

Product illustration · sample data

The gap nobody reports

Closed-on-time and solved-for-the-resident drift apart quietly. The gap shows up later as repeat calls, complaints to council members and lower trust, long after an annual survey could have caught it.

Why now

States are creating customer experience offices, and many cities already run 311 and licensing on Salesforce. The data and the workflow are already in one place; only the resident's voice is missing.

Three steps, one closed loop

1 · Ask at the moment

When a 311 request, permit or benefit case closes, send one or two questions by email, text or QR code, in the resident's language.

2 · Keep it on the record

The answer lands on the same Salesforce case, so staff see the score next to the work, not in another tool.

3 · Close the loop

A low score opens a follow-up case for the responsible department; leaders see trends by service and district.

Low score
Follow-up case to the department that owns the service

Neutral score
Check-in within 30 days

High score
Credit the crew, ask for public feedback

Start with a 90-day pilot

1 service to start, such as potholes, permits or license renewals

3 measures agreed up front: response rate, follow-up within 5 business days, repeat contacts

90 days to a results review with your team and leadership

Measure what residents experience, inside Salesforce
